

Passaic County Mosquito Control

Pesticide Fact Sheet

Municipalities are encouraged to share this information with all residents in their community.

Fyfanon® ULV Mosquito Insecticide

This fact sheet answers some basic questions about mosquito control products in use in your county. Passaic County Mosquito Control, along with several other resources (listed at the end of this sheet), can provide more detailed information.

What is Fyfanon® ULV Mosquito Insecticide and how is it used?

Fyfanon® ULV is an insecticide product that is recommended for mosquito control in New Jersey by Rutgers, The State University of New Jersey. It contains the active ingredient *malathion*. The U.S. Environmental Protection Agency's (EPA) current evaluation considers this malathion-containing product to be slightly toxic with minimal potential risk to people when used properly as part of an integrated mosquito control program.

This malathion-containing product is used for the control of adult mosquitoes. While habitat management and measures to control immature mosquitoes in water are preferred and most used, the spraying of adult mosquitoes is called for when biting populations reach critical levels or when a disease organism is present in adult mosquitoes. A very fine mist is sprayed into the air since flying mosquitoes must directly contact the pesticide in order for it to be effective.

How can I reduce my exposure to Fyfanon® ULV?

Because of the very small amount of active ingredient released per acre, the risk to the general public from the use of malathion-containing products is minimal. Avoiding exposure is always the safest course of action. Any possible exposure risk can be reduced by following some commonsense actions:

- Pay attention to notices about spraying found through newspapers, websites, automated telephone messages, or distributed by municipal, county, or state agencies.
- Plan your activities by limiting time spent outside during times of pesticide treatments.
- Bring your pets and their food/water dishes inside before pesticide application.
- Bring clothing and children's toys inside before pesticide application.
- Stay away from application equipment, even when not in use.
- Remain indoors with windows closed, window air conditioners closed to the outside air, and window fans turned off during spraying.
- Avoid direct contact with surfaces that are wet from pesticide spraying. Do not allow children to play in areas that have been sprayed until they have completely dried (approximately one hour).
- If you must remain outdoors, avoid eye and skin contact with the spray. If you get spray in your eyes or on your skin, flush and rinse with water.

What are the symptoms of exposure to Fyfanon® ULV?

Symptoms of over-exposure to this malathion-containing product can include headache, nausea, dizziness, excessive sweating, salivation, excessive tearing, and a runny nose. The chance of experiencing these symptoms of over-exposure with proper use is low. You should contact your physician, other medical providers, or the New Jersey Poison Information and Education System (NJPIES) at (800) 222-1222 if you experience these symptoms following a pesticide spraying.

How long will Fyfanon® ULV last in the environment?

Fyfanon® stays in the air for a short time until it lands on surfaces. Malathion has a low persistence and breaks down in water and soil within 1 to 25 days. Malathion breaks down faster in sunlight.

Where can I get more information?

The following are resources for more information regarding pesticides and mosquito control in your area.

For overall pesticide-specific information:
National Pesticide Information Center (800) 858-7378

For pesticide health information & possible exposures:
New Jersey Poison Information & Education System (800) 222-1222

For New Jersey pesticide regulation & misuse complaints:
NJDEP Bureau of Pesticide Compliance (609) 984-6568

For Federal pesticide regulations:
USEPA Region 2 Help Desk (877) 251-4575

For statewide mosquito control information:
NJDEP Office of Mosquito Control Coordination (609) 292-3649

For mosquito control insecticide recommendations:
Rutgers University, Center for Vector Biology (848) 932-3146

For local mosquito control information:
Passaic County Mosquito Control (973) 305-5754

For local health information:
Passaic County Department of Health Services (973) 881-4396
