

Lightning Safety Tips

Adapted from the National Lightning Safety Institute

1. **PLAN** your evacuation and safety measures in advance. When you first see lightning or hear thunder, activate your emergency plan. Now is the time to go to a building or a vehicle. Lightning often precedes rain, so don't wait for the rain to begin before suspending activities.
2. **IF OUTDOORS...** Avoid water, high ground, and open spaces. Avoid all metal objects including electric wires, fences, machinery, motors, power tools, etc. Unsafe places include underneath canopies, small picnic or rain shelters, or near trees. Where possible, find shelter in a substantial building or in a fully enclosed metal vehicle such as a car, truck, or a van with the windows completely shut. If lightning is striking nearby when you are outside, you should:
 - a. **Crouch down** Put feet together and place hands over ears to minimize hearing damage from thunder.
 - b. **Avoid proximity** to other people. Stay a minimum of 15' from others.
3. **IF INDOORS...** Avoid water, doors, and windows. Do not use the telephone and/or headsets. Turn off, unplug, and stay away from appliances, computers, power tools, & TV set. Lightning may strike exterior electric and phone lines, inducing shocks to inside equipment.
4. **SUSPEND ACTIVITIES** for 30 minutes after the last observed lightning or thunder.
5. **INJURED PERSONS** do not carry an electrical charge and can be handled safely. Apply First Aid procedures to a lightning victim if you are qualified to do so. Call 911 or send for help immediately.
6. **KNOW YOUR EMERGENCY TELEPHONE NUMBERS.**

**“If you can see it, flee it; if you can hear it,
clear it.”**
