

WHAT IS AN ENERGY CODE COMPLIANCE REPORT, AND HOW DO I PRODUCE ONE?

The Energy Code requires that an area with conditioned air (heating or cooling) be energy efficient.

There are multiple methods of demonstrating Energy Code compliance for a single-family dwelling. The most commonly utilized method is a software program called REScheck, available free from the US Department of Energy. You enter the details of your project and REScheck generates an energy code compliance report that documents your compliance to the Energy Subcode.

The software can be found at <https://www.energycodes.gov/rescheck>

You can download and install the software OR use the "REScheck Web" tool directly on the web site.

Submit two signed copies of the REScheck with your permit application.
